TISSUE SPECIFICITY: Pollen (By similarity).
SIMILARITY: Belongs to family 28 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                            FUNCTION: May function in the depolymerization of the pectin in its walls during pollen tube elongation, or in that of the pistil during pollination.

CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-D-
                                                                                                                                                                                                                                                                                                                                                       galactosiduronic linkages in TISSUE SPECIFICITY: Pollen (

(ATALYTIC ACTIVITY: {(1,4)-alpha-D-galacturonide}(N) + {(1,4)-alpha-D-galacturonide}.

SUBCELLULAR LOCATION: Secreted.

TISSUE SPECIFICITY: Pollen.

DEVELOPMENTAL STAGE: Late stages of pollen development.

SIMILARITY: Belongs to family 28 of glycosyl hydrolases
                                                                                                                                                                   olygalacturous -...
(ol. Biol. 229:797-801(1993).

FUNCTION: May function in depolymerizing pectin
function, and tube growth. Acts

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polygalacturonase.

CATALYTIC ACTIVITY: {(1,4)-alpha-D-galacturonide}(N)

{(1,4)-alpha-D-galacturonide}(N-1) + D-galacturonate.

SUBCELLULAR LOCATION: Secreted.

TISSUE SPECIFICITY: Pollen.

DEVELOPMENTAL STAGE: Late stages of pollen developmen

SIMILARITY: Belongs to family 28 of glycosyl hydrolas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   X57627; CAA40850.1; ALT X57628; CAA40851.1; ALT X57743; CAA40810.1; -... Submitted (MAR-1995) to the EMBL/GenBank/DDBJ databases.
Submitted (MAR-1995) to the depolymerization of the FUNCTION: May function in the depolymerization of the its walls during pollen tube elongation, or in that olduring pollination (By similarity).
-I- CATALYTIC ACTIVITY: Random hydrolysis of 1,4-alpha-D-galactosiduronic linkages in pectate and other galacticity: Pollen specific.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pfam; PF00295; Glyco_hydro_28; 1.
